## [Precautions]

- Use a 24V DC isolated power supply to drive the neon lamp strip and the ripple wave of constant voltage source shall be less than 5%. It is not allowed to use RC voltage reduction or non-isolated power supply to drive the neon lamp strip.
  - In actual applications, 20% of the power supply shall be kept (only 80% of the power is used) to guarantee that sufficient voltage is available to drive the product.
  - Attention shall be paid to safe operation. After powering on, it is not allowed to touch the AC power supply to avoid an electric shock.
  - Attention shall be paid to the positive and negative poles of the wires during installation and whether the power supply conforms to required voltages to avoid damages.
  - Avoid scratching, distortion and irregular bending of the product during installation; otherwise it may cause irreparable damage to the product.
  - Please do not bend the strip into an arc with a diameter less than 60mm to ensure the longevity and reliability, the bending diameter too small will damage the product itself.
  - If the actual length of application exceeds the specified using length, it will lead to overload heating and uneven brightness.
  - Non-professionals are prohibited from installing, disassembling and repairing the product.
  - Do not use any acid or alkaline adhesive to fix products (including not limited to glass cement, etc.)
  - Product is not suitable for use in swimming pools and fountains.
  - Please confirmed before usage as products of varied sizes show slight differences in their color under same color temperature due to their structural differences.
  - When IP65 protective products are installed and applied, the waterproofing grade should be degraded after self-processing and cutting.
  - In mass production, 1-2 splices are allowed within every 5 meters.
  - Please use professional cutting tools when cutting.
  - The board of this product is a DJ light strip board. After the secondary processing of the welding wire, before the plug is fixed, do not pull or bend the solder joints for many times, otherwise the solder joints will fall off.
  - Due to the characteristics of the silicone material, it is normal for the color of the colloid to change slightly after the neon product is used for a long time.
  - It is strictly forbidden to use 502/705 and other adhesives that are prone to chemical reactions with silica gel during construction and installation. It is recommended to use silicone sealant for bonding.
  - Long-term storage and the remaining products after cutting and use must be sealed to avoid exposure to organic environments such as aldehydes/benzenes.
  - When the product is installed and used, it is recommended that the product as a whole be in the same environmental conditions to avoid inconsistent color changes of the product colloid due to differences in product exposure and environmental conditions.
- .When using dimmer and dimming power supplies like Triac, etc, conduct compatibility tests on the product, dimmers and power supplies to ensure full compatibility. If any issues arise, contact COLORS for technical support.
